

TRACK SPRINGS

Worn or leaking recoil spring assemblies can cause big problems for your machine. Get your track spring assemblies from a leader in quality and reliability.

We offer H&R brand and used track springs, two excellent alternatives to the high-priced OEM parts, for a variety of different manufacturers and machines.

Quality being our main concern, you can count on H&R brand track springs to withstand the harshest of conditions. We have worked hard to make sure that every track spring we have manufactured meets or exceeds our rigorous quality control standards.

Our used track spring assemblies are opened and thoroughly inspected to make sure that they will perform at expected levels and resealed when needed. You are able to benefit from the extended life of the part and know that the quality and reliability will meet your needs.

Excellent Warranty. Satisfaction Guaranteed.

- Maintaining proper track tension is a critical factor affecting undercarriage lifespan and machine performance. Broken track springs or poorly functioning adjusters will shorten track chain life and reduce the ability to absorb shock and maintain control.
- Track spring assemblies consist of a recoil spring, grease cylinder, and idler yoke, if applicable.
- Factory assembled and calibrated to ensure correct preload tension.
- All spring assemblies are designed to meet or exceed OEM specifications and tested to ensure correct fitment and performance.
- Supporting all major manufactures from 12 to 100 ton machines in all applications.
- **New track springs backed by a 1 year warranty.**

ABOUT H&R

Locations to Serve You

We have the ability to get your products where you need them, fast and at a reduced cost.

Massive Inventory

With hundreds of track springs ready to ship, we're the largest supplier in North America and a trusted source in the industry. Providing off the shelf OEM replacements, custom application bearings, and reverse engineering services, we have a solution for every need.

Parts Specialists

Over 10 highly-trained Parts Specialists to help work with you in supplying the parts you need to get you back up and running quickly.
